LinkedIn | GitHub | Portfolio | TryHackMe Profile

PROFESSIONAL SUMMARY

Cybersecurity Engineering student at UCAS with hands-on experience in **SOC analysis, threat hunting, web application security and penetration testing**. Ranked **1st in Palestine in the Cybersecurity track at the AI Olympics** and **2nd in the Gaza Strip at the Palestinian Collegiate Programming Contest (PCPC)**. Completed the TryHackMe SOC Level 1 path. Built a custom Snort 3 detection rule for reverse shell activity and completed my graduation project, sysRAD, a real-time ransomware detection system built with machine learning. Vice President of the Engineering Club at UCAS. Seeking to apply my skills to a real-world cybersecurity project within an international, collaborative team under an industry supervisor.

EDUCATION

BSc in Cyber Security Engineering *Sep 2022 – Present*

University College of Applied Sciences (UCAS), Gaza, Palestine

TECHNICAL SKILLS

Security Operations & Blue Team: SOC Analysis, Threat Hunting, Threat Intelligence, SIEM Tools, Network Monitoring, Alert Analysis, Malware Analysis

Offensive & Application Security: Web Application Security, Penetration Testing, Vulnerability Assessment, Risk Assessment, Database Security, CTF

Programming & Technical: Python, Java, SQL, Linux, Git, Web Development, Cryptography

AI & Data: Machine Learning, Deep Learning, NLP, AI Deployment

Professional: Team Collaboration, Problem Solving, Communication, Leadership, Time Management, Self-Learning

SELECTED PROJECTS

Reverse Shell Detection with Snort 3 *Snort 3 · Kali Linux · Windows 10*

- Built a custom Snort 3 detection rule to identify reverse shell activity in an isolated Kali Linux / Windows 10 lab.
- Analyzed traffic direction, TCP session state, and content matching to improve detection accuracy.
- Practiced the SOC workflow from detection and validation through investigation and response.

sysRAD — Real-Time Behavior-Based Ransomware Detection using ML (Graduation Project) *Python · Machine Learning*

- Built a real-time, behavior-based ransomware detection system for Windows using Python and ML, with two teammates.
- Contributed to the project structure, model development, configuration, and testing.
- Presented and discussed the project before an examination committee.

ACHIEVEMENTS & LEADERSHIP

1st Place — Cybersecurity Track, AI Olympics Gaza Sky Geeks & STEAM Center *May 2026*

- Ranked 1st in Palestine in the Cybersecurity track in an AI-focused competitive environment.

2nd Place — Palestinian Collegiate Programming Contest (PCPC), Gaza Strip *Oct 2025*

- Qualified for the regional competition (ACPC); strengthened algorithmic problem-solving and teamwork under time pressure.

4th Place — CTF Competition, UCAS × CyberTalents *Jul 2023*

- Solved challenges in cryptography, web exploitation, and digital forensics.

Vice President — Engineering Club, UCAS *Mar 2026 – Present*

- Coordinate with committee leads and support the execution of technical events, workshops, and student activities.

Secretary — Engineering Club, UCAS *Dec 2025 – Mar 2026*

- Managed internal communication, meeting documentation, reports, schedules, and coordination between committees.

CERTIFICATIONS & TRAINING

- **AI+ Developer™** — AI CERTs® (90%)
- **Cybersecurity Training** — Gaza Sky Geeks / STEAM Center (50 hours): network monitoring, penetration testing, malware analysis, social engineering defense
- **Advanced Threat Hunting & Intelligence** and **SOC Analysis & Threat Hunting** — CyberTalents
- **Database Security** and **Data Structures & Algorithms** — Gaza Sky Geeks; **Introduction to Cybersecurity** — CyberTalents
- **TryHackMe: SOC Level 1** (Completed); **Junior Penetration Tester** *(In Progress — 50%)*
